Education

FPT Academy (Aptech), Advanced Diploma in Software Engineering – Ho Chi Minh City, Vietnam

2023 – 2026

- Graduated with Distinction (84.25/100)

Projects

recon-qa – API & Browser Testing Tool | [PyPI](#) | [GitHub](#)

Aug 2026 – Present

Python · Playwright · Pydantic · SQLAlchemy · SQLite

- Published a Python testing tool on PyPI that creates API tests from OpenAPI specifications and supports browser testing with Playwright.
- Implemented parallel test runs, authenticated requests, response checks, screenshots, and HTML/JSON reports to investigate failures.
- Integrated optional AI suggestions for test cases and failure explanations, while using test assertions to determine whether checks pass.

Groundwork – Workspace Search & AI Context | [Website](#) | [Desktop](#) | [GitHub](#)

Jul 2026 – Aug 2026

Tauri 2 · FastAPI · React · TypeScript · Python · SQLite FTS5 · Docker

- Built a Windows desktop app for searching local files, with a bundled Python engine that updates the index as files change. Local search works without cloud services.
- Combined SQLite text search, offline embeddings, and filename matching to find relevant files; used Python AST parsing to identify code symbols.
- Introduced AI answers based on file excerpts and Git history, with source references. Limited file access to selected workspaces and required confirmation before changes.

Tenvora – Business Management & Ledger | [Website](#) | [APK](#) | [GitHub](#)

Apr 2026 – Jun 2026

ASP.NET Core · C# · React · Flutter · EF Core · PostgreSQL · Docker

- Built web and Android apps for sales, inventory, expenses, and customer/supplier balances. Used JWT-scoped queries, atomic transactions, PostgreSQL advisory locks, and idempotency records to isolate business data and prevent overpayments and duplicate writes.
- Integrated a Gemini assistant that answers questions using business records, with server-side validation and user confirmation before changes; recorded before/after snapshots for auditing.
- Tested concurrent payments, account boundaries, and UI workflows; set up GitHub Actions to deploy the backend to Cloud Run and build signed Android releases.

LogiFlow – Freight Management System | [Website](#) | [GitHub](#)

Oct 2025 – Jan 2026

Academic Team Project · Spring Boot · Java · React · Flutter · PostgreSQL

- Led a four-member academic team, overseeing implementation and integration while contributing across the stack. Took primary responsibility for authentication, database schema design, and backend architecture.
- Implemented driver-location updates over WebSockets and displayed them on React/Leaflet maps, with checks for invalid coordinates.
- Integrated Mistral OCR to extract driver-license fields for review, PayPal sandbox payments, and handwritten delivery signatures; added JUnit tests and CI checks.

Technical Skills

Languages: Python, C#, Java, TypeScript, JavaScript, SQL, Dart

Backend: ASP.NET Core, FastAPI, Spring Boot

Frontend: React, Flutter, Tauri

Databases & Storage: PostgreSQL, SQLite, Redis, S3/MinIO

AI/LLM: Gemini, Mistral, RAG, LLM APIs

Cloud & CI/CD: Google Cloud Run, Docker, GitHub Actions

Testing & Tools: Pytest, xUnit, JUnit, Vitest, Playwright, Git, Postman
