Professional Summary

Software Engineering graduate who builds full-stack applications with a strong backend focus. Built and deployed production-style web applications centered on secure backend systems, asynchronous processing, AI document workflows, and REST APIs.

Education

FPT Academy (Aptech), Advanced Diploma in Software Engineering

Nov 2023 – Jan 2026

Ho Chi Minh City, Vietnam

- GPA: 3.5/4.0
- TechWiz Competition Participant (2025): collaborated in a team to design, build, and present a working application within five days.

Projects

InsightPDF AI Document Platform | [Live Demo](#)

July 2026 – present

Personal Project | FastAPI, SQLAlchemy, PostgreSQL, pgvector, Celery, Redis, React, Docker

- Centralized PDF search, organization, analysis, comparison, and conversion in one workspace, including OCR fallback for scanned documents.
- Kept extraction, indexing, AI generation, and PDF transformations outside API requests with Celery and Redis jobs; made AI answers traceable through owner-filtered retrieval, source snippets, and page citations.
- Protected private files with owner-scoped database queries, S3-compatible object storage, validated uploads, and authenticated downloads; covered the stack with pytest, Vitest, Playwright, and GitHub Actions.

VeriSpend | [Live Demo](#)

Apr 2026 – June 2026

Personal Project | C#, ASP.NET Core, EF Core, React, TypeScript, PostgreSQL, Docker

- Reduced manual receipt entry with editable AI-assisted extraction and safe manual-review fallback; helped managers prioritize claims using deterministic risk, policy, duplicate, and budget signals.
- Prevented cross-organization access by deriving tenant context from authenticated claims and enforcing role-protected approval workflows in the backend.
- Preserved review accountability with actor-attributed audit snapshots for creation, edits, submission, approval, rejection, and deletion; tested guardrails with xUnit and Vitest.

LogiFlow

Oct 2025 – Jan 2026

Academic Team Project | Java, Spring Boot, React, Flutter, PostgreSQL, STOMP WebSockets

- Unified the freight lifecycle from customer order and dispatch planning to delivery confirmation, payment, and audit history for a four-member academic team.
- Developed role-based backend workflows for customers, dispatchers, drivers, and administrators using Spring Boot, Spring Security, JWT, and PostgreSQL.
- Improved dispatch visibility with live GPS tracking, route planning and rerouting, chat, and notifications over STOMP WebSockets; supported drivers through a Flutter mobile client.

Technical Skills

Languages: Python, C#, Java, TypeScript, JavaScript, SQL

Backend: FastAPI, SQLAlchemy, ASP.NET Core, EF Core, Spring Boot, Spring Security, REST APIs, Celery

Frontend & Mobile: React, Vite, Flutter

Data & Infrastructure: PostgreSQL, MySQL, MongoDB, pgvector, PostGIS, Redis, MinIO, Docker

Testing & Delivery: pytest, xUnit, JUnit, Vitest, Playwright, GitHub Actions, Git

Certifications

- Neural Networks and Deep Learning - DeepLearning.AI (2025)
- Machine Learning and NLP Basics - Edureka (May 2025)
