Education

FPT Academy (Aptech), Advanced Diploma in Software Engineering – Ho Chi Minh City, Vietnam

2023 – 2026

- Graduated with Distinction (84.25/100)

Projects

recon-qa – Open-Source API Testing Tool | [PyPI](#) | [Source](#)

Aug 2026 – Present

Python · FastAPI · Playwright · Pydantic · SQLAlchemy · SQLite · PyPI

- Published an automated API testing package on PyPI (`pip install recon-qa`) that parses OpenAPI schemas and generates happy-path, boundary, validation, and authentication test suites.
- Built an asynchronous execution engine with bounded worker pools and a provider-agnostic LLM interface supporting Gemini, Mistral, OpenAI, and local Ollama models.
- Combined deterministic HTTP error classification with LLM-based root-cause analysis to identify test failures and generate actionable code-fix recommendations.

Groundwork – AI Document Workspace | [Live Demo](#) | [Source](#)

June 2026 – Aug 2026

FastAPI · Python · React · PostgreSQL · pgvector · Celery · Redis · Cloud Run

- Architected a full-stack document workspace using FastAPI, React, and PostgreSQL/pgvector for multi-format document ingestion, semantic chunking, and vector retrieval.
- Orchestrated asynchronous OCR and AI generation workflows via Celery/Redis background jobs with per-job cancellation, deployed to Google Cloud Run.
- Built citation verification that cross-checks claims against source pages and prevents ungrounded exports, backed by 102 Pytest tests and Playwright E2E suites.

VeriSpend – Multi-Tenant Expense Platform | [Live Demo](#) | [Source](#)

Mar 2026 – May 2026

ASP.NET Core · C# · React · TypeScript · EF Core · PostgreSQL · Mistral AI · Docker

- Engineered a multi-tenant expense review platform in ASP.NET Core and React, enforcing tenant isolation through JWT workspace scoping.
- Implemented immutable audit trails with EF Core interceptors, recording actor identity and JSON state snapshots across expense approval transitions.
- Automated receipt extraction using Mistral Vision with deterministic spend limit guardrails, verified by a custom evaluation CLI and 14 xUnit tests.

LogiFlow – Freight Management Platform | [Live Demo](#) | [Source](#)

Oct 2025 – Jan 2026

Academic Team Project · Team Lead · Spring Boot · Java · React · Flutter · PostgreSQL · Docker

- Led a 4-member team and built the core backend, including PostgreSQL schema, authentication, authorization, and multi-role logistics workflows with Spring Boot.
- Developed real-time driver tracking with WebSockets and React/Leaflet, plus proof-of-delivery signature capture and live route monitoring.
- Integrated OCR driver verification, constraint-based driver assignment, PayPal checkout, and PDF invoicing; containerized with Docker Compose and GitHub Actions CI.

Technical Skills

Languages: Python, C#, Java, TypeScript, JavaScript, SQL, Dart

Backend & Frameworks: FastAPI, ASP.NET Core, Spring Boot, REST APIs, WebSockets, Celery

Frontend & Mobile: React, Flutter, HTML5/CSS3, Tailwind CSS

Databases & Storage: PostgreSQL, pgvector, Redis, S3/MinIO

Infrastructure & CI/CD: Docker, Google Cloud Run, GitHub Actions

Testing & Tools: Pytest, xUnit, JUnit, Playwright, Vitest, Git, Postman
