Education

FPT Academy (Aptech), Advanced Diploma in Software Engineering – Ho Chi Minh City, Vietnam 2023 – 2026

- Graduated with Distinction (84.25/100)

Projects

recon-qa – Open-Source QA Automation Tool | PyPI | GitHub Aug 2026 – Present

Python · FastAPI · Playwright · Pydantic · SQLAlchemy · SQLite · PyPI

- Published `recon-qa` on PyPI; built a CLI tool that parses OpenAPI specs and crawls web pages to generate automated test cases.
- Executed HTTP API and Playwright browser checks concurrently, generating standalone HTML reports with failure screenshots.
- Added optional AI error analysis supporting multiple LLM providers (Gemini, OpenAI, Mistral, Anthropic, Ollama) to summarize test failures and suggest fixes.

Groundwork – Windows Storage Analyzer & Diagnostics | Website | GitHub June 2026 – Present

WinUI 3 · C# · .NET 10 · Win32 API · WMI · Multi-Provider AI · Inno Setup

- Built a native Windows desktop app in WinUI 3 and .NET 10 to scan local drives and visualize folder space usage.
- Implemented hardware diagnostics using WMI for CPU, memory, BIOS, and disk health, with safe cleanup via the Windows Recycle Bin.
- Integrated an AI assistant supporting configurable local and cloud LLM providers (Ollama, Gemini, OpenAI, Anthropic, Mistral) to answer system questions and explain scan results.

Tenvora – Multi-Tenant Finance & Ledger Platform | Website | GitHub Mar 2026 – Present

ASP.NET Core · C# · React · TypeScript · Flutter · Dart · EF Core · PostgreSQL · Docker

- Built a multi-tenant finance web app in ASP.NET Core and React for freelancers and small shops to track invoices, debts, and expenses.
- Developed a Flutter mobile companion for camera receipt capture uploading directly to Supabase Storage, paired with client-side CSV statement import.
- Enforced transactional consistency using EF Core and PostgreSQL locks to prevent race conditions during payment updates, backed by 170+ xUnit tests.
- Integrated an AI assistant supporting configurable LLM providers (Gemini, OpenAI, Mistral, Ollama) to search records and draft transactions with manual confirmation.

LogiFlow – Freight Management System | Website | GitHub Oct 2025 – Jan 2026

Academic Team Project · Spring Boot · Java · React · Flutter · PostgreSQL

- Collaborated in a 4-member academic team to build a freight management system, taking primary responsibility for Spring Security auth and backend APIs.
- Built dispatch workflows checking cargo weight against vehicle capacity, and streamed real-time truck locations to Leaflet maps using WebSockets.
- Automated driver license text extraction using Mistral OCR API, and wrote over 60 JUnit unit and integration tests.

Technical Skills

Languages: Python, C#, Java, TypeScript, JavaScript, SQL, Dart

Backend & APIs: FastAPI, ASP.NET Core, Spring Boot, REST APIs, WebSockets, SQLAlchemy, EF Core

Desktop, Web & Mobile: WinUI 3, React, Flutter, Tailwind CSS

Databases & Storage: PostgreSQL, SQLite, Supabase Storage

Testing: pytest, Playwright, xUnit, JUnit, Vitest, Postman

Infrastructure & Tools: Docker, Google Cloud Run, GitHub Actions, Git

AI Integration: OpenAI API, Gemini API, Mistral API, Anthropic API, Ollama
